Dear all,

additionally to the aspects of the other two, I am only concerned about the promises we make in the report. The promise of an report including “winding topology, thermal performance, and an assessment of rare-earth dependency risk” (E.g. row 12) could be a bit too ambitious for the beginning. A more vague formulation might be better, so that we don't limit ourselves too much and are more flexible in terms of the amount of work involved. This approach is done in row 11 or 13.

Best regards,

Dr.-Ing. Christian Bratke
